  Tomaru A., Toya T., Yasunishi A., Muramatsu M., Hayashizaki Submitted (JUL-2001) to the EMBL/GenBank/DDBJ databases.

-! SIMILARITY: Belongs to peptidase family S1.

C -!- SIMILARITY: Contains 1 MAM domain.

"Enterokinase, the initiator of intestinal digestion, is a mosaic protease composed of a distinctive assortment of domains.";
Proc. Natl. Acad. Sci. U.S.A. 91:7588-7592(1994).
-!- FUNCTION: Responsible for initiating activation of pancreatic proteolytic proenzymes (trypsin, chymotrypsin and carboxypeptida A). It catalyzes the conversion of trypsinogen to trypsin which turn activates other proenzymes including chymotrypsinogen, procarboxypeptidases, and proelastases.
-!- CATALYTIC ACTIVITY: Selective cleavage of 6-Lys-[-Ile-7 bond in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCE FROM N.A., AND DISEASE.

trypsinogen.
SUBUNIT: Heterodimer of a catalytic (light) chain and a multidomain (heavy) chain linked by a disulfide bond.
multidomain (heavy) chain linked by a disulfide bond.
SUBCELLULAR LOCATION: Type II membrane protein (Probable).
TISSUE SPECIFICITY: Intestinal brush border:
PYM: The chains are derived from a single precursor that is cleaved by a trypsin-like protease.
DISEASE: Defects in PRSS7 are a cause of enterokinase deficiency [MIM:228200]; a life-threatening intestinal malabsorption disord characterized by diarrhea and failure to thrive.

"Structure of murine enterokinase (enteropeptidase) and expression in small intestine during development.";
Am. J. Physiol. 274:G342-G349(1998).
-I- FUNCTION: Responsible for initiating activation of pancreatic proteolytic proenzymes (trypsin, chymotrypsin and carboxypeptidase A). It catalyzes the conversion of trypsinogen to trypsin which in turn activates other proenzymes including chymotrypsinogen, procarboxypeptidases, and proelastases (By similarity).
-I- CATALYTIC ACTIVITY: Selective cleavage of 6-Lys-|-Ile-7 bond in
                                                                                                                                                                                                                                                                                                                                                                                                                                            01-NOV-1997 (Rel. 35, Created)

SUBCELLULAR LOCATION: Type II membrane protein (Probable)
PYM: The chains are derived from a single precursor that
cleaved by a trypsin-like protease (By similarity).
SIMILARITY: Belongs to peptidase family S1.
SIMILARITY: Contains 2 CUB domains.
SIMILARITY: Contains 2 LDL-receptor class A domains.
SIMILARITY: Contains 1 MAM domain.
SIMILARITY: Contains 1 SRA domain.
SIMILARITY: Contains 1 SRCR domain.

Cleaves pro-
between Arg-122 and Ser-123 (By similarity).
-:- SUBCELLULAR LOCATION: Type II membrane protein.
-:- TISSUE SPECIFICITY: Highly expressed in heart.
-:- SIMILARITY: Belongs to peptidase family S1.
-:- SIMILARITY: Contains 2 frizzled (FZ) domains.
-:- SIMILARITY: Contains 7 LDL-receptor class A dom
-:- SIMILARITY: Contains 1 SRCR domain.

2:
  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BB

C;Function:
A;Bescription: cleaves propeptide from trypsinogen to produce active trypsin A;Bescription: cleaves propeptide from trypsinogen to produce active trypsin A;Besthway: intestinal digestive hydrolase cascade
C;Superfamily: enteropeptidase; Clr/Cls repeat homology; LDL receptor ligand
C;Keywords: glycoprotein; hydrolase; intestine; serine proteinase; transmemb
F;22-38/Domain: transmembrane #status predicted <TMM>
F;52-117/Product: enteropeptidase mini chain #status predicted <MCH>
F;118-800/Product: enteropeptidase heavy chain #status predicted <HCH>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Residues: 1-1035 <KIT>

A56318
A56318
enteropeptidase (EC 3.4.21.9) precursor [validated] - human
N;Alternate names: enterokinase
C;Species: Homo sapiens (man)
C;Date: 19-May-1995 #sequence_revision 09-Aug-1996 #text_change 09-Jul-2004
C;Accession: A56318; B43090
R;Kitamoto, Y; Veile, RA.; Donis-Keller, H.; Sadler, J.E.
Biochemistry 34, 4562-4568, 1995
A;Title: cDNA sequence and chromosomal localization of human enterokinase, the proteolytic A;Reference number: A56318; MUID:95234679; PMID:7718557
A;Accession: A56318
A;Residues: 1-1019 <KIT>

C; Comment: This protein, synthesized in the liver, circulates as a noncovalent
C; Comment: The zymogen is activated by factor XIIa, which cleaves the molecule
are linked by one or more disulfide bonds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ક

C;Comment: This protein, synthesized in the liver, circulates as a noncovalent complex will compose the molecule into a light comment: The zymogen is activated by factor XIIa, which cleaves the molecule into a light care linked by one or more disulfide bonds.

C;Comment: The enzyme cleaves Lys-Arg and Arg-Ser bonds. It activates, in a reciprocal reinogen and may also play a role in the renin-angiotensin system by converting prorenin in

plasmin (EC 3.4.21.7) precursor [validated] - human
N;Alternate names: plasminogen precursor [misnomer]
N;Contains: angiostatin; microplasmin; plasminogen
C;Species: Homo sapiens (man)
C;Date: 24-Apr-1984 #sequence revision 02-Dec-1994 #text_change 09-Jul-2004
C;Accession: A35229; I52242; A26646; I62738; I84609; S03735; A00929; A04627;
